

MicroCam

Digital microscope that captures directly to a memory card

The MicroCam digital microscope is ready to use any time you need it. With a built-in LCD screen, LED lights, 4 — 100X zoom lens, 5 megapixel camera, and rechargeable batteries, the MicroCam will capture highly magnified images and movies.

The MicroCam folds flat and fits compactly in a small case when traveling. Open it and the MicroCam conveniently adjusts to view your sample on the built-in LCD screen. Use the adjustable brightness LEDs and zoom control, then touch the camera button to capture an image or movie directly to a standard SD memory card.

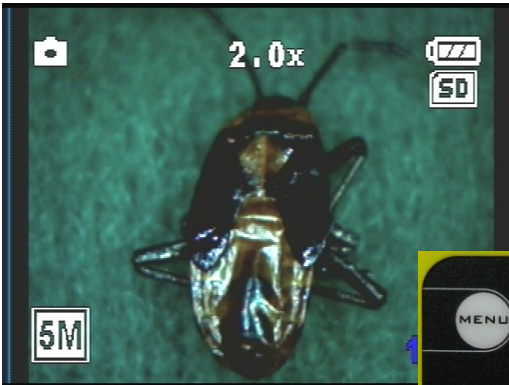

You can review the captured images right on the MicroCam or connect to a PC and download the images to view on your computer.

Features

- Handheld portable microscope camera with built-in 2" LCD screen
- 5 megapixel camera sensor
- 3 — 100x magnification
- 6 white LED lights with adjustable brightness
- Rechargeable lithium-ion batteries for 5 hours of continuous use
